## Phoenix Chapter Newsletter

### February 2016

From Our Chapter Chair, Emily Johnson

Hi everyone, I hope you all had a pleasant January. As we go full throttle into February, there are

some things to look forward to. Come support our booth at the Buckeye Airfare on February 6th, and don't forget to volunteer for our Flying Companion Seminar on February 20th.

I'm planning on flying to Yuma for the first time this week with Theresa Farley. I'm attempting to always fly places I've never been to get out of my comfort zone. It's nice to have a flying buddy with whom to do so. I hope that as a chapter we can start planning more flying trips with each other.

Looking forward to seeing you all at our meeting this month!  
~Emily

**OUR MISSION:** The Ninety-Nines is the international organization of women pilots that promotes advancement of aviation through education, scholarships, and mutual support while honoring our unique history and sharing our passion for flight.

## ABORT BRIEFS AND LOSS OF CONTROL CONSIDERATIONS

Come Join the APA at Deer Valley Restaurant for a presentation on briefing a rejected takeoff, actions for surviving an engine loss after takeoff, preventing loss of control during an engine failure after takeoff, and techniques and considerations for practicing "the impossible turn." Be there at the Deer Valley Restaurant at 5:30 on Feb 26 for a presentation and dinner to follow.

Abort Brief Considerations

Practice Abort Briefs

## Why do an Abort Brief?

Immediately prior to takeoff, pilots can improve the chance of a successful emergency procedure by reviewing the actions that they will take in the event of an engine failure on takeoff. If the engine fails, the pilot does not have to think about what action to take—they simply execute what was discussed in the brief. This provides additional benefits when flying with another pilot—both pilots know exactly what is going to be done if the engine failure occurs and can speak up or intervene if during the excitement of the event the pilot flying is tempted to stray from the brief.

In my brief I discuss three potential scenarios. First, if the engine fails during takeoff with sufficient runway to land straight ahead on the runway, next the procedure if too low to turn back to the airport, and last the altitude and direction of turn based on winds for a turn back to land opposite direction. This altitude varies based on weight, runway slope, wind, and density altitude. Practice in your own aircraft with a qualified instructor.
